- Pillar in the Trust and Safety Agenda of Dutch Blockchain Coalition
- Connecting international initiatives and projects
- Trust Tech Mission 16-20 October to Singapore
- Developing multi-year programme

Today focus

- How to connect policy and technology

Trust Technology Research Approach

How to connect policy, administration and social experience with decentralized trust technologies?

Background

Trust in our digital government and ecosystem is a cornerstone of our society. It is not trivial, that there is trust by default. Various cyber attacks, disinformation, digital fraud, invasion of privacy or unintentional technical failures underline the challenges we face. At the same time, digital transformation continues, as it offers enormous potential for innovation and new efficiencies. This trend is strongly driven by new decentralized technologies and these developments often ahead of governance, policy or social perception. How can we close the loop and align technological trends with societal expectations on the way to a trustworthy digital society?
